/ Clone lib="mouse Organ of Corti; Vector: pBluescript; The
organ of Corti (OC) was fine dissected from a total of 386
OC as followed from pot-matal (P) day 5; 72
from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
14 from P12 and 24 from P13. After killing animals by
cervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modiculus.
Total RNA was extracted using the micro Fasttrack kit
(catalog # K1593-02; Invitrogen, Carlabad, CA), according
to manufacturer's instructions. Reverse transcription and
library construction were carried out with the Uni-Zap XR
vector kit (catalog # 237211, Stratagene) and Uni-Zap XR
digapack III Gold Cloning kit (catalog # 237612), both
from Stratagene (La Johla, CA, USA), according to
manufacturer's instructions. Briefly: 1.5 ug mRNA was
reverse transcribed using a hybrid oligo(d7) linker-primer
that contains an Xho I site. First strand synthesis was
primed with the linker- primer and transcribed using
Moloney mutina eleukemia virus reverse transcriptes
(MMLV-RT) and 5-methyl dCTP. The second strand was
synthesized with DNA polymerase and RNase H. Complementary
DNA was blunt ended with Pfu DNA polymerase, ligated with
RCOR I adapters in the presence of ligase and digested
with Xho I. The cDNA was sequentially size fractionated
over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden)

and clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for CDNAs greater than 400bp and 1000 bp respectively. The CDNA was then directionally ligated to the inizAp XR vector, which had been predigested with ECOR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XLI Blue MRF' cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the concerts6 (TM) plasmid purification kit (Invitrogen, Carlabad, A) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the universal MN1 sleverse primer (CAGGAAACAGCTAAGAC) and 25* strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MN Terrad thermal cyclers (MN Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Poster City, CA). The frequency distribution of the library is a follows: 72% of genes have I copy; 14.3% 2; 12% 3-10; 14 11-50 and 0.1% 51-150. As to gene function, 43% of genes are present in GenBank and have know function; 23* have bits in GenBank, but do not have assigned function; 12% are uncharacterized ESTS and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            630 bp mRNA linear EST 19-JUN-2002

1 (bases 1 to 684)
city, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."

epithelium was carrentuly dissected out of rem Modicius. Total RNA was extracted using the micro Fasttrack kit catalog # K159-02; Invitrogen, Carlbadd, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (catalog # 237512). Stratagene) and Uni-Zap XR vector kit (catalog # 237612), both Gigapack III Gold Cloning kit (catalog # 237612), both Gigapack III Gold Cloning kit (catalog # 237612), both Gigapack III Gold Cloning kit (catalog # 237612), both Gigapack III Gold Cloning kit (catalog # 237612), both Gigapack III Gold Cloning kit (catalog # 237612), both Gigapack III Gold Cloning kit (catalog # 237612), both Gigapack III Gold Cloning kit (catalog # 237612), both Gigapack III Gold Cloning kit (catalog # 237612), both Gigapack III Catalog Manual Clonital Record Size Septon Gigapace II Complementary DNA was blunt ended with Ptu DNA polymerase, ilgated with EcoR I adapters in the presence of ligase and digested with EcoR I adapters in the presence of ligase and digested with EcoR I adapters in the presence of ligase and digested with EcoR I adapters in the Dresence of ligase and digested vith EcoR I adapters in the Dresence of Ligase and digested vith EcoR I adapter for CDNA was sequentially size fractionated over pharmacia Size Septon (Pharmacia, Uppsala, Sweden) and Clontech Chrome Spiricho (Contech, Pana) All Columns to enrich for CDNA greater than 400bp and 1000 by recombinants. Strategene ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the abase submarted to be 11,100,000 vecombinants. Strategene ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the Phages. Upon plating of the phage library, individual CDNA clones were generated with the universal M13 reverse primer (CDG Concerts) (M1) plasmid purification kit (Invitrogen, Carlbad, CA) as instructed by the manufacturer. EcoR perference of the CDNA clones were
/clone lib="Mouse Organ of Corti cDNA pBluescript"
/note="Organ: Organ of Corti, Vector: pBluescript; The
organ of Corti (OC) was fine dissected from a total of 386
OC as follows: 10.2 samples from post-natal (P) day 5; 72
from P6; 60 from P7; 46 from P13. After Willing animals by
14 from P12 and 24 from P13. After Willing animals by
cervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modicular.

/clone lib="Mouse Organ of Corti cDNA pBluescript"
/note="Organ: Organ of Corti; Vector: pBluescript; The
organ of Corti (OC) was fine dissected from a total of 386
OC as follows: 102 samples from post-nata! (P) day 5; 72
from Pot 6; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
14 from P12 and 24 from P13. After killing animals by
cervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modiolus.
Total RNA was extracted using the micro Fastrack kit
(catalog # K1593-02; Invitrogen, Carlsbad, CA), according
to manufacturer's instructions. Reverse transcription and
library construction were carried out with the Uni-Zap XR
Gigapack III Gold Cloning kit (catalog # 23721), both
from Strategene (La Johla, CA, USA), according to
manufacturer's instructions. Briefly: 1.5 ug mRNA was
reverse transcribed using a hybrid oligo(dT) linker-primer
that contains an Xho 1 site. First strand synthesis was
primed with the linker- primer and transcribtuse
Moloney murine leukemia virus reverse transcriptuse
(MMLV-RT) and 5-methyl dCTP. The second strand was
synthesized with DNA polymerase and RNase H. Complementary
DNA was blunt ended with Pft DNA polymerase, ligated with
ECOR I adapters in the presence of ligase and digested
with Xho I. The CDNA was sequentially size fractionally ligated
columns to enrich for cDNA was then directionally ligated to
the Uni-Zap XR vector, which had been predigested with
ECOR I and Xho I. The phagemid was petimated to be 11,100,000
respectively. The cDNA was then directionally ligated to
the bhage all brant was sequentially as adone
respectively. The phagemid full interference
respectively. Strategene 'B Strategene's Brander of the phage of the phage of the phage of the phage of the phage of the phage of the phage of the pha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Concert96(TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the

epitnellum was carerully dissected out of the modifications. Total RNA was extracted using the micro Fasttrack kit (catalog # K1593-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (catalog # 237211, Stratagene) and Uni-Zap XR Gigapack III Gold Cloning kit (catalog # 237612), both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using Moloney murine leukemia virus reverse transcriptuse (MMLV-RT) and S-methyl dCTP. The second strand was synthesized with DNA polymerase and RNAse H. Complementary DNA was blunt ended with Pfu DNA polymerase and digested with Scor I adapters in the presence of ligase and digested with a contrach for conva spin-100 (Clontech, Palo, CA) and Clontech Chroma Spin-100 (Clontech, Palo, A) columns to enrich for conva Spin-100 (Clontech, Palo, A) columns to enrich for conva Spin-100 (Clontech, Palo, A) columns to enrich for conva Spin-100 (Clontech, Palo, A) and 1000 by respectively. The cDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with Gigapak III Gold and, upon titration on XLI Blue MRF' cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's Exassist Interference resistance halper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the resue plasmid DNA from the phages. Upon plating of the resue plasmid DNA from the phages. Upon plating Off Carlery (Malolal CDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA slones were generated with the 5' end of the cDNA clones were generated with the strength Highove terminator Recurse primar (GAGGAAACACCTATCACC) arrendth Biodye terminary Recurse primar (GAGGAAACACCTATCA strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on My Terrad thermal cyclers (My Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified." 119 200 from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P10; 14 from P9; 20 from P10; 14 from P9; 20 from P10; 14 from P12 and 24 from P13. After killing animals by cervical dislocation followed by decapitation, the bulla was removed and opened in Leibowitz medium. The bony and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modicius. 140 CTATACTATTTCTCTGGCTAGTGCTCAAGAAGATTATAATGCCCCGGACTGTAGATTCAT 141 CTATACTATTTCTCTGGCAAGAGCACAGGAAGATTACAATGCCCCAGACTGTAGGTTCAT CATGGAATATTTATGGACCGTCTAGCTTCCAAGAAGCTCTGTGC-AGATGAGTGAGTGTGT Gaps 1; Score 238.6; DB 13; Length 409; Pred. /dev_stage="Post natal day 5 to 13"
/clonella="Mouse Organ of Corti cDNA pBluescript; The
/clonella="Mouse Organ of Corti; Vector: pBluescript; The
organ of Corti; Oco was fine dissected from a total of 386
Oc as follows: 102 samples from post-natal (PD) day 5; 72
from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
14 from P12 and 24 from P13. After killing animals by
cervical disalocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modicious.
Total RNA was extracted using the micro Fasttrack kit
(catalog # K1593-02; Invitrogen, Carlabad, CA), according
to manufacturer's instructions. Extratagene) and Uni-Zap XR
vector kit (catalog # 23721), Stratagene) and Uni-Zap XR
vector kit (catalog # 23721), Stratagene) and Uni-Zap XR
digapack III Gold Cloning kit (catalog # 237612), both
from Stratagene (La Jolla, CA, USA), according to
manufacturer's instructions. Britefly: 15 ug mRNA was
reverse transcribed using a hybrid oligo(dT) linker-primer
that contains an Xho I site. First strand synthesis was
primed with the linker- primer and transcribtase
(MMLV-RT) and 5-methyl dCTP. The second strand was
synthesized with DNA polymerase and RNase H. Complementary

DNA was blunt ended with Pfu DNA polymerase, ligated with EcoR I adapters in the presence of ligase and digested with EcoR with Xno I. The CDNA was sequentially size fractionated over pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for CDNAs greater than 400bp and 1000 bp, respectively. The CDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with Gigapak II Gold and, upon tirrarion on XLI Blue MRF' cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96 (TM) plasmid purification kit (Invitrogen, Carlabad, CA) as instructed by the manufacturer. ESTS from the 5' end of the CDNA clones were generated with the universal M13 reverse primer (CAGGAAACAGCTATACAC) and 25%

let from FL2 and 44 Incer Milling animals by cervical dislocation followed by decapitation, the bulla was removed and opened in Leibowitz medium. The bony capsule of the cochlea was chipped away, stria vascularis and spiral ligament were removed and the sensory and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Tocalog # KLS9-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (catalog # 237211, Stratagene) and Uni-Zap XR digapack III Gold Cloning kit (catalog # 237212), both from Stratagene (La Jolla, CA) uSA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an XnO I site. First strand synthesis was primed with the linker-primer and transcribed using Moloney muritine leukemia virus reverse transcriptase (MMLV-RT) and 5-methyl dCTP. The second synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with Ptu DNA polymerase, igated with Econ Murit he become the paramed size septentially size fractionated over Pharmacia size septentially size fractionated over Pharmacia in the presence of ligase and digasted with Xno I. The cDNA was sequentially size fractionated over Pharmacia size septentially size fractionated over Pharmacia Size Septent (Pharmacia, Duppala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNA sys reater than 400bp and 1000 by the DNA was blund from the phages. Upon plating of the phage library was estimated to be 11,100, or resoundinants. Stratagene's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted resouce plasmid DNA from the phages. Upon plating of the phage library was estimated culture with the Concerbed (TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer with the cunding one concerbed (TM) plasmid purin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /dev stage="Post natal day 5 to 13"

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

T according the meanons inhibitory activity protein, a member of a recently identified family of secreted proteins.";
D Proc. Natl. Acad. Sci. U.S.A. 98:5515-5520(2001).
C -: FUNCTION: ELICITS GROWTH INHIBITION ON MELANOMA CELLS IN VITRO AS WELL AS SOME OTHER NEUROECTODERMAL TUMORS, INCLUDING GLICMAS.
C -: SUBCELLULAR LOCATION: Secreted.
C -: TISSUE SPECIFICITY: ALL MAINGNANT MELANOMA CELL LINES TESTED AND INFREQUENTLY IN CLIONA CELL LINES.
C -: PTM: MAY POSSESS TWO INTRAMOLECULAR DISULFIDE BONDS.
C -: SIMILARITY: BELONGS TO THE MIA / OTOR FAMILY.
C -: SIMILARITY: Contains I SH3 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MELANOMA DERIVED GROWTH REGULATORY PROTEIN.
